

13) Which of the following isn't a risk factor for diffuse carcinoma?

(H-pylori)

14) The second most common gastric malignancy is:

(Lymphoma)

*** في كل الاحوال، من بين، أنت، لا، في، الأجابة ***

15) One of the following is true regarding esophageal path.

- a) Achalasia signifies lower esophageal sphincter relaxation.
- b) squamous cell carcinoma is least frequent at upper one-third.
- c) Plummer-Vinson syndrome encompasses all of esophageal webs, proctitis and anemia.

16) Ulcerative colitis, as distinctive from Crohn's dis., features the following except:

(it commences at right colon to extend distally)

17) The following are true in chronic peptic ulcer except:

- a) single and larger than stress ulcer
- b) Gastric antrum is the most common site.
- c) Acid secretion is necessary for its development
- d) Very rare malignant potential if at all.
- e) Most cases are associated with H. pylori infection.

(لأنه (b) ليس كذلك)

18) Most common type Gastric polyps is:-

(hyperplastic polyps)

1. Which is wrong abt Amantadine:

(2)

- a. it inhibits penetration
- b. hydrophobic amine with clinical efficacy against all types of influenza.
- c. concentrate & buffer the contents of the endosomal vesicles, preventing uncoating.

block the proton channel formed by the M2 matrix protein

has similar characteristics as Rimantadine

which is wrong abt Acyclovir (ACV)

- a. it's a nucleoside analogue.
- b. highly effective against varicella-zoster virus (VZV)
- c. activation of the drug requires three kinase activities to be present in the cell.
- d. ACV affinity to viral polymerase is more than 100 folds that to cellular polymerase.

ACV has no effect on host DNA replication

choose the best combination in these statements.

- a. acyclovir \Rightarrow nucleoside analogue
- b. adenine arabinoside \Rightarrow pyrimidine analogue
- c. Zanamivir \Rightarrow protease inhibitor
- d. saquinavir \Rightarrow inhibitor of assembly
- e. Nevirapine \Rightarrow nonnucleoside polymerase inhibitor

→ what is true about hiatus hernia:

- obesity and ↑ abdominal pressure

2 → Causes related to esophagus:

(reflux esophagitis + esophageal adenocarcinoma).

3 → most common tumor of esophagus ⇒ Squamous Cell

4 → " " type of peptic ulcer ⇒ pyloric antrum

5 → Plummer Vinson Syndrome ⇒ (Iron def. anemia + glossitis + esophageal webs)

6 → The following conform with H-pylori in GIT, except:

* No relation to duodenal peptic ulcer.

7 → Autoimmune chronic gastritis has following features, Except:

* tendency to affect antrum.

8 - Crohn's disease. -- جِلْدَان

9 - Achalasia. -- جِلْدَان

 - e. none of the above.
- answer d.

11. 1429 II
 1. Which of the following doesn't occur in Atrophy?
 to Atrophy

1. of the following doesn't occur in Atrophy?
 → autophagic vacuoles decrease in size.

2. Barrett @ Esophagus:-
 → squamous epith. ^{oes} replaced by intestinal columnar.

3. Glycogen storage disease is due to:-
 cong. enzyme defects in the synth. or breakdown of glycogen.

4. aggregates of ^{iron} ~~cell~~ represent?
 → ~~Perrin~~ Hemosiderin (I think).

5. Which of the following can develop dystrophic calcification?
 damaged heart valves.

6. Which of the following is not related to metastatic calcification?
 a- ectopic PTH secretion
 b- Plasma monocyte cell tumours.
 c- Vit-D deficiency.
 d- sarcoidosis

e. non of the above.

(7) One of the following is not related to intracellular hyaline? arteriosclerosis.

(8) In acute inflamm vasodilation occurs in arterioles
choices are: venules, capillaries, etc

(9) 1 of the following induces cell contraction:- Leukotriens.

(10) Adhesion & transmigration by endothelial cells - venules
ASAP

(11) MSA in is eosinophils.

(12) Chronic Granulomatous disease
NADPH oxidase deficiency.

(13) Selectins → induced by thrombin

(14) From plasminogen to plasmin is by:- Kallikrein.

(15) Catalase:-

(16) PG function

- a - Heat
- b - Redness
- c - Swelling
- d - Pain
- e - Loss

* (17) Weibull's Parada contains:- P-selectin.

(18) Transmigration:- PECAM.

(19) one of the following is not a chemotactic agent:-

Interthink * (20) Pus contains all the following except:- bacteria

Notes Fluid-protein edema cell debris neutrophils lymphocytes

(21) one of the following is related to non-oxygen dependent killing? lysosomes.

(22) one of the following is not of acute phase signs?

- a. fever
- b. loss appetite
- c. Neutrophilia
- d. malaise

→ (e) hypertension

(23) All of the following are related to NO time radical except

- a. short-lived (in seconds)
- b. reduction of leukocyte recruitment
- (c) induces platelet activation
- d. act as microbicidal agent
- e. vasodilation

(24) fibrinous pericarditis / caused by infection → exudate

(25) Most radiosensitivity Testes

(26) Liquefactive necrosis in brain

- (27) Not Reticuloendothelial cells
 - a. Kupffer
 - b. spleen & LN
 - (c) Plasma cells
 - d. Macrophages
 - e. alveolar macrophages

Q 5: The following are TRUE regarding esophageal malignancy, EXCEPT:

- A. Squamous cell carcinoma outnumber other types. (True)
- B. Upper 1/3 is the most common site. (True)
- C. Polypoid fungating in peptic is most frequent. (True)
- D. Onset may be insidious. (True)
- E. Peak incidence at middle age or older. (True)

Q 6: Each of the following complications are correct, EXCEPT:

- A. Achalasia / Esophageal cancer. (True)
- B. Pernicious anemia / autoimmune gastritis. (True)
- C. Cushing / Acute peptic ulcer. (True)
- D. Malignant / duodenal ulcer. (False) 100% Benign
- E. Increase incidence of H. pylori with aging. (True)

Q 7: The following are true regarding ulcer of upper GIT, EXCEPT:

- A. Acute ^{stress} peptic ulcer frequently ~~are~~ multiple. (True)
- B. Peptic ulcer doesn't occur in Achylia gastrica. (True)
- C. The smallest ulcer is malignant at the time of diagnosis. (True)
- D. Acute peptic ulcer might complicate severe burn. (True)
- E. Malignant ulcer. (False)

Features of stomach

Q 8: The following confirm chronic gastritis, EXCEPT:

- A. Autoimmune gastritis appear at pyloric antrum. (True)
- B. Gastritis impossible to complicate into dysplastic malignancy. (True)
- C. H. pylori infection related to chronic gastritis is the most common cause of peptic ulcer. (True)
- D. H. pylori infection may cause peptic ulcer. (True)
- E. (False)

Q 9: Which of the following characterize "Lethargic Syndrome"?

- A. Exams related. (True)
- B. Resulted from sleeplessness. (True)
- C. Disorganization of the information. (True)
- D. Discovered by students of UJ university. (True)
- E. All of the above is true. (True)

* chronic gastritis is the most common cause of peptic ulcer. D. H. Pylori *

* infection may cause peptic ulcer. E. F. ? *

* Q.9: Which of the following characterize "Labatation Syndrome" *

* A. Exam related. B. Resulted from sleeplessness. *

* C. Disorganization of the informations. D. Discovered by students. *

* of UJ university. E. All of the above is True. *

The End

1. The following are Complication of achalasia except :-

⇒ Rapid Swallowing

r' polices

2. The Most ~~Comp~~ Common Cause of esophageal Perforation

is :-

⇒ Cirrosis

3. Barret's esophagus except :-

Congenital disease not assoc

4. stress ulcer :-

sever pain
at night

5. Autoimmune except :- Hyper acidity

6. Most Common Site of peptic ulcer ?

PT part of duodenum

7. The second most gastric Malignancy is :-

Lymphoma

8. Gastroesophageal pathology except :-

Congenital pyloric stenosis is predominant in female. In males

9. Most Common site of Carcinoma is :-
Appendix

10. Choose the correct answer ⇒
varices most common cause by portal hypertension

11. Most Congenital disease is ⇒ Mickle diverticulum

12. Crohn disease - except : non skip

13. acute gastric ulcer except :- most common in
duodenum less duodenum ^{gastric} _{ulcer}

14. which of the following isn't a factor : - - -
H. Pylori

15. benign tumor → Germinal tumor

- ① Most common site of carcinoid ? (Appendix)
- ② The following are complication of achalasia except:
(Rapid Swallowing)
- 5 ③ The most common cause of esophageal
(cirrosis)
- ④ Autoimmune dis. except:
(Hyperacidity)
- ⑤ Most common site of peptic ulcers :-
10 (duodenum) (first part of duodenum)
- ⑥ The second most gastric malignancy
- ⑦ gastroesophageal pathology, all true except:
(congenital pyloric stenosis is predominant in female)
- 15 ⑧ Most common congenital dis. ?
(Mickle's diverticulum)
- ⑨ choose the correct answer :-
(varices most common caused by portal hypertension)
- ⑩ According to Barrett esophagus all true except:
20 (Is a congenital dis.)
- ⑪ All the following are characteristic of Chron dis except:
(non-skip lesions)
- ⑫ Acute gastric ulceration, all true except:
25 (most common in duodenum less in stomach)

هذه أسئلة امتحان مادة الـ Pathology للجهاز الهضمي GIT، علماً أن الدكتور لم يراجع

من كتابها (التليخا) وهذا إذا كانت بحسبك. جمل غير واضحة أريد منجوعة، فذلك بسبب عدم

وضوح الصوت.

Q1: Malabsorption Syndrome is due to impairment of assembly of
chylomicrons. ~~which~~ will cause

- A] disease
- B] Pernicious anemia
- C] Lactose Intolerance
- D] Celiac disease
- E] Abetalipoproteinemia

Q2: The following characterize Crohn disease EXCEPT:

- A] keeping of healthy alternating with of disease intestinal segment
- B] Kerkring radiological sign
- C] Transmural intestinal involvement
- D] No specific age
- E] Granuloma in all cases

Q3: Among the following, the most common site of chronic peptic ulcer disease is:

- A] Gastric Fundus
- B] Cardia
- C] 3rd part of duodenum
- D] Pyloric Antrum
- E] Esophageal

Q4: Concerning intestinal congenital anomalies, one of the following is TRUE:

- A] Meckel's diverticulum is the most rare anomaly in small intestine
- B] Hirschsprung disease is a hypergangliakama
- C] Malignancy is the most common outcome of meckel's diverticulum
- D] Diarrhea predominate in Hirschsprung disease
- E] Peptic ulceration is a possible meckel's diverticulum outcome

Q.5: The following are TRUE regarding esophageal malignancy, EXCEPT:

- [A] Squamous cell carcinoma outnumber other types. [B] Upper 1/3 is the most common site. [C] Polypoid fungating in peptic is most frequent. [D] Onset may be insidious. [E] Peak incidence at middle age or older.

Q.6: Each of the following complications are correct, EXCEPT:

- [A] Achalasia / Esophageal cancer. [B] Pernicious anemia / autoimmune gastritis. [C] Cushing / Acute peptic ulcer. [D] Malignant / duodenal ulcer. [E] Increase incidence of H. pylori with aging.

Q.7: The following are true regarding ulcer of upper GIT, EXCEPT:

- [A] Acute peptic ulcer frequently ^{are} multiple. [B] Peptic ulcer doesn't occur in Achylhydria. [C] The smallest ulcer is malignant at the time of diagnosis. [D] Acute peptic ulcer might complicate severe burn. [E] Malignant ulcer.

Q.8: The following confirm chronic gastritis, EXCEPT:

- [A] Autoimmune gastritis appear at pyloric antrum. [B] Gastritis impossible to complicate into dysplastic malignancy. [C] H. pylori infection related to chronic gastritis is the most common cause of peptic ulcer. [D] H. pylori infection may cause peptic ulcer. [E] ?

Q.9: Which of the following characterize "Labotation Syndrome"?

- [A] Exam related. [B] Resulted from sleeplessness. [C] Disorganization of the informations. [D] Discovered by students of UJ university. [E] All of the above is True.

The End

In Management of Ulcer disease the most used drug in Neutralize the hyperacidity is :-

Megaldrate

5

1. GnRH From where it is released ?

2. "Kallmans syndrome"

3. Ganirelix

Q. 5 all of the following hormone excreted by pituitary gland except :-

6. Alcohol → will ↓ the secretion of ADH

7. Acne is a side effect of → ACTH

15 8. The drug that have a glassy taste is :-

9. what is the 2nd Messenger of

IP3

10

Felypressin

11. Liothyronine sodium → T3

20 12. L-thyroxine sodium → T4

13. Lithium Carbonate →

14. T4 will decrease in presence of Aspirin

Aspirin + T4

drug interaction

25

drug interaction

abt the Centrally acting emetics:

15. Syrup of ipecac "Ipecacuanha" has local + Central effect ↑ CTZ.

16. Antipsychotic butyrophenones ^{اعراض الادوية} Giving post or preoperatively.

17. 5-HT₃ receptor antagonist: ondansetron.

highly effective in the Management of Nausea and vomiting induced by cytotoxic drugs and radiotherapy.

18. H₂-Receptor blockers → Cimetidine ^{مزيل حموضة}

19. Adrenomimetic amines → Isoproterenol, Metaproterenol ^{مزيل سعال}
Side effect → tachycardia.
2. Prednisone ^{مزيل التهاب}

20. Zafirlukast ^{مزيل سعال}

23. Interstitial pneumonia and fibrosis -
Methotrexate

30 Bupivacaine بوفيفاكين
Method طريقة
of application and Clinical uses -

31 "Prilocaine less toxic than lidocaine" بديوكاين
أقل سمية من ليدوكاين

32 Cocaine - Good vasoconstrictor.

33 Lidocaine - the most widely used anesthetic.

34 ~~Expectorants~~ Guaifenesin
Histamine Releasing inhibitor مثبط

35 ~~ectropid~~ ectropid → Serotonin Syndrome

37 H1 antagonist :- know the most and least Cholinergic Activity.

selective Serotonin inhibitor :-
Fluoxetine

39 Serotonin antagonist :- Ketanserin

40 the Name of the drugs that decrease the
induce vomiting

sterone ستيروئيد

Corticosteroid \rightarrow \uparrow Catabolism on Protein.

" \rightarrow have Aldosterone like effect.

abt the Clinical uses of Corticosteroid

what is the Corticosteroid drug that does not affect the axis?

Dexamethasone.

Dexamethasone :- اعرف هذا الدواء

abt drug-drug interaction of Corticosteroid. Know everything about Tamoxifen for Breast Cancer.

Mifepristone :- \rightarrow Anti-progestins

Flutamide \rightarrow Antiandrogens.

selective Cox2 inhibitor \rightarrow Meloxicam.

non-selective \rightarrow Aspirin, Ibuprofen.

Abortifacient, labor inducer \rightarrow dinoprost.

Infertility & drugs used:-

1- GnRH

2- Flutemid

All of the above.

54 Endometriosis:-

- 1. GnRH 2. Mifeprostone 3. Dozegan Danazol

4. 1+3 5. All of the above.

55 drug for sustaine postpartum Hemor. -- 2. Oxytocine
d. diprost

56. Contraceptive wrong: decrease ovary cancer.

57 ADH inhibited by except:-

- a. Hypoosm. b. Hypovolemia. c. tricyclic Antidepressant
- d. ? e. ?

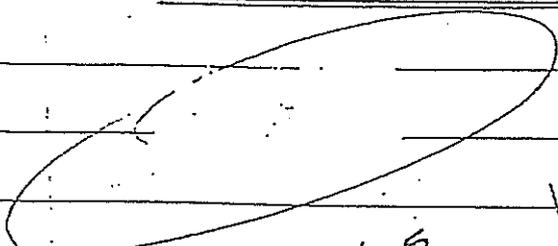

58 Diabetes insipidus - desmp -

59 property exist in all Corticosteroid ?

- 1. water + Na Retention.

60 tamoxifen

Endocrine system mid term

Endocrine exam (mid term)

1. choose the correct statement:-

most of bone Ca^{++} is poorly exchangeable
in the ECF.

2. After removal of PTH all of the following will ~~be~~ ^{decre.} except?

1. urine P 2. Ca

3. w of the following is not required for prolactin
myoepith. cells.

4. After radioimmunoassay, all of the human -ve tumours
classified into:-

Gonadotrophs.

5. w of the following is incorrect combination

thyroglossal duct: \rightarrow elevated while swallowing
protrusion.

6. w of the following is common for fentanyl & amide
treatment-tolerance.

7. w is not correct.

IP₃ causes phosphorylation of substrate in
the cell.

8. After exogenous insulin injection what happens:-

cortisol \uparrow glucose \uparrow Δ \downarrow .

9. w of the following is different from others in
protein synthesis:-

Insulin, cortisol, GH, cpi \rightarrow glucagon.

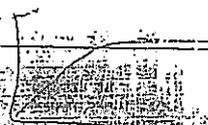

the correct answer is insulin

bcz all of them can catabolize & Anabolic but

but insulin is all the way anabolic.

10. Bio. chem.

10. draw the curve for H & R relation

1) risk abt Hirschsprung's disease -

Rem: $M > F$

It's Rectum the 1st phase

← abt's abt

5 It's dilatation of the infected site.

2) Alcoholic liver ⇒ ^{were-f} Portal Stenosis.

3) the worst prognosis of the following: -

10

4) Most Common Malign. tumor: -

Hepatocellular Carcinoma.

5) Most Common Benign tumor in the liver is

15

6) The virus that transmit by the Mother is -

7) abt the # virus which DNA & which RNA

8) Pancreas Hypertension → phlebotom.

9) The disease that have the ↑ chance to convert to tumor is -

⇒ Familial Polyposis Syndrome

25

It's villous ← hyperplasia

ask abt Adenocarcinoma

ask abt Lymphoma

52 Comparison bet ulcerative Colitis and
Crohn's D --- skip or diffuse

القولون العصبي

13 Celiac disease \Rightarrow sensitivity to
gluten

25

Endocrine ~~sp~~ ^{mid} exam

Endocrine exam (midterm)

1. Choose the correct statement:-
most of bone Ca^{2+} is poorly exchangeable.
w/ the ECF.
2. After removal of PTH all of the following will ~~be~~ ^{occur} except?
1. \downarrow urine P
2. \downarrow Ca^{2+}
3. w/ of the following is not required for prolactin:-
myoepith. cells.
4. After radioimmunoassay, all of the hormone -ve tubes
& classified into:
Gonadotrophs.
5. w/ of the following is incorrect combination
thyroglossal duct \rightarrow elevated urine Ca^{2+} & $PTHrP$.
6. ~~the~~ w/ of the following is common for penicillins & β -lactams.
treatment & allergy.
7. w/ is not correct.
 IP_3 causes phosphorylation of substrate Ca^{2+} in the cell.
8. After exogenous insulin injection what happens:-
cortisol \uparrow glucose \uparrow Adip.
9. w/ of the following is different from others in
Protein synthesis:-
* Insulin, cortisol, GH, cpi \rightarrow glucocorticoids.
the correct answer is insulin.
bcz all of them can catabolic & anabolic both.
But insulin is all the way anabolic.
10. * Bio. chem.
10. draw the curve for H & R relation

11. W contains Pseudo substrate seq in PKC.

12. If we remove glycoprotein from glucagon, what happens?

duration of action ↓

bcz glycoprotein required for identification specificity & whether or removed.

binding becomes ~~not stable~~ not so strong.

13. what contains EF hand.

calmodulin.

14. what is correct about ADH.

~~ADH~~ ADH help in regulation of ACTH

look biochem slides.

15. Pituitary tumor that ~~not~~ glucocorticoid results in:-

↑ Nat reabs

↑ ---

hyperpigmentation

16. W is wrong about cervical cyst :-

commonly internal branchial cisterna --- X

↓
cysts.

17. W is wrong about prostaticoma.

~~prostaticoma~~ may occur due to hyper proliferation

18. 3° Parathyroidism occurs due to

↑ secretion and insufficiency

vit D therapeutics X

19. what happens in ↑ aldosterone

↑ water retention ⇒ ↑ H₂O.

20. what's comb abt IGF.

↑ bond to protein

21. Somatostatin produced by β cells.

inhibit secretion of α , β cells.

22. TSH is

hormone from hypothalamus. X

short peptide ✓

23. PIGUI somatost. $\frac{is\ 21\ 2}{this\ 2}$

24. what is not common b/w Thiamazole, Methimazole
inhibit T_4 conversion to T_3 .

25. is responsible for the heat of the body.

Thyroid hormone.

26. will increase in hypothyroidism.

~~cholesterol~~ cholesterol.

27. is not the ~~factor~~ ✓ not a direct effect of PTH.

activated & converted to 25 hydroxy vitamin D.

28. is not correct about the body.

oxytocin → used to induce labour.

29. radio active iodine is used for ~~the~~ β cells.

used in pregnancy ~~on~~ α cells.

30. in ACTH ↓ ~~what happens~~ β cells.

hypersecretion & hyposecretion of the β cells.

31. W is wrong:

internalization of the Receptor

is always associated to degradation & inactivation. X

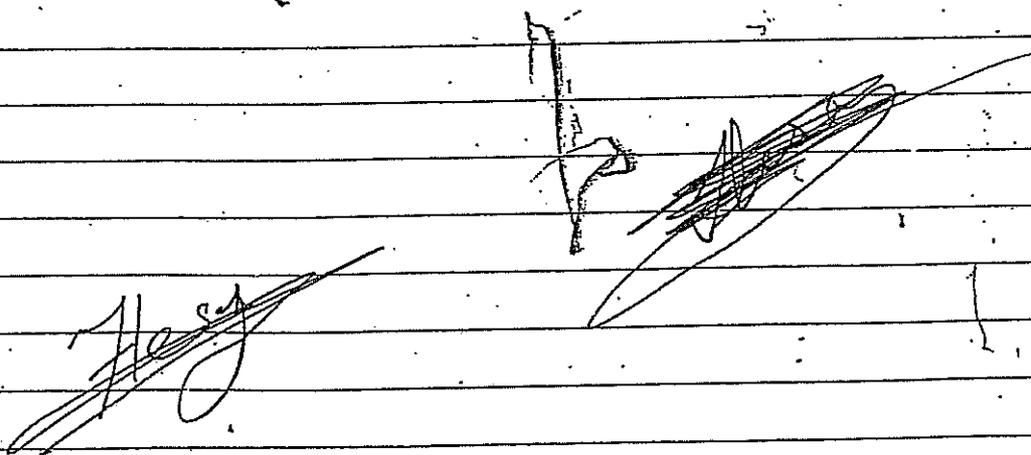

32. Thyroid cortex is always associated with \uparrow TSH. X

33. ~~I~~ W is true.

Ligation of subclavian A

At the medial border of scalenus Ant
will not result in preventing
thyroid drainage from blood.

Anatomy → Micro → Histology
Micro of pathology

Patient Post tasting in Post Part of the tongue, because

of Crossing of:

- a) Corda Tympani from facial N.
- ~~X~~ b) glossopharyngeal.
- c) Greater palatine N.
- d) lingual branch of

→ When you ask a patient to protrude his tongue, it deviate to Rt, the injured N. is:

- ~~X~~ a) Rt hypoglossal N.
- b) Lt hypoglossal N.
- c) Rt. glossopharyngeal N.
- d) Lt. glossopharyngeal N.

Patient have a serology for HBV

IgM = -ve

HBeAg = +ve

IgG = -ve

HBeAg +ve

The Patient has:-

~~X~~ a) Acute HBV Infection

b) Chronic HBV

c) Immunized against HBV

d) B Window Patient

= a protrude of viscera in Ant abd. wall above the inguinal canal & Lt to Inf. epigastric vessels, It's most commonly for b) & c)

a) direct inguinal hernia

~~X~~ b) Indirect inguinal hernia

c) femoral hernia

d) umbilical hernia

All of the following are true about *Vibrio Cholera* except.

~~A) heat stable enterotoxin (it's heat labile)~~

~~B) Acid labile K~~

C) NOT common in Jordan ✓

D) Transmitted by water contamination ✓

E) A+B

All about *Vermicularis* is True except.

~~A) Thread Worm~~

~~B) diagnosis by look for eggs in stool~~

C) treated by mebendazole - Vermox Mosame ✓

D)

All of the following are features to differentiate between *T. Solium* & *T. Saginata* EXCEPT

~~A) Gravid Proglottid~~

~~B) Mature Proglottid~~

~~C) hexacanth egg~~

D) hook

regarding to *E. histolytica* It is:

~~A) wide ectoplasm~~ ✓

~~B) splinters chromatid bodies~~

~~C) eccentric Nucleus~~ ✓

D) A+B

E) A+B+C

the living stage of *S. mansoni* is the adult male & female worms
make incision in the abdominal wall

in marginal branch of the caecum

the eggs are passed in the stool

All of the following about Salmonella Typhi is True EXCEPT -

- a) H, O & V: Antigen ✓
- b) affect human only ✓
- c) Skin widal Test ✓
- d) meningitis ✓

→ ~~e) ??~~

→ All about chronic gastritis is true except.

- a) may become Atrophic gastritis ✓
- b) H. pylori most common cause ✓

~~c) Autoimmune causative agent is mostly pyloric Antrum. (mostly in bodies of stomach)~~

Regarding to chron disease, all of the following is True EXCEPT.

a) String sign ✓

~~b) All associated with granulomatous~~

Acute stress ulcer are true EXCEPT.

a) frequently multiple lesions ✓

b) Patient feel severe pain ✓

~~c) Small ulcer when diagnosed are malignancy~~

d) CNS trauma lead to Cushing ulcer.

Regarding to chronic Peptic ulcer all are true except.

~~a) mostly due to H. pylori~~

→ ~~b) Duodenal ulcer lead to Malignancy~~

c) Common site is pyloric Antrum.

According to Squamous cell Carcinoma in esophagus all True except.

a) Associated with Achalasia ✓

b) most common type ✓

~~c) Most common affect upper part of esophagus~~

GI
